Modern computing tools like Maple (symbolic computation) and Matlab (a numeric computation and visualization program) make it possible to easily solve realistic nontrivial problems in scientific computing. In education, traditionally, complicated problems were avoided, since the amount of work for obtaining the solutions was not feasible for the students. This situation has changed now, and the students can be taught real-life problems that they can actually solve using the new powerful software. The reader will improve his knowledge through learning by examples and he will learn how both systems, MATLAB and MAPLE, may be used to solve problems interactively in an elegant way. Readers will learn to solve similar problems by understanding and applying the techniques presented in the book. All programs used in the book are available to the reader in electronic form.

Assessment Issues in Language Translation and Interpreting Cambridge Scholars Publishing

Public Service Interpreting is a hugely complex activity, encompassing human, ethical, commercial and political dimensions. It is unseen and unrecognized by most of the population but vital to those who depend on it for their security or wellbeing. The quality of PSI provision is seen by the authors as a clear indicator of how a society views and responds to the realities of a multi-ethnic and multilingual global community. Following recent significant changes in the power balance between them this book explores the increasing tensions among multiple stakeholders who together deliver such a fundamental service in a modern open society. Chapters focus on how all stakeholders need to appreciate the wider context of political and economic realities whilst collaborating more responsibly to deliver the conditions, training and support needed for expert linguists to be attracted to and retained in this vital profession.

This book is an invaluable resource for students preparing to sit the Chartered Institute of Linguists' Diploma in Public Service Interpreting (DPSI), as well as for anyone interested in Public Service Interpreting and/or Scottish Law. The book contains a collection of 14 role play topics carefully prepared and tested in classroom settings, which should assist students to prepare to sit Unit 1 of the DPSI. In addition, the book should help DPSI and non-DPSI students alike to gain invaluable insight into some parts of the Scottish justice system which they are likely to encounter when working as public service interpreters in legal settings. Some of the areas covered include: - Police station procedure; - Court procedure; - Immigration and asylum; - Antisocial Behaviour Orders (ASBOs); - Drink Driving; - Other offences, such as murder, culpable homicide and breach of the peace. The book also aims to provide a valuable tool for professionals who are new to legal public service interpreting, by helping to bridge the knowledge gap often present in new court and police interpreters with regard to police station and court procedures. The author of the book, based in Glasgow, has more than 20 years of experience working in the language service industry, having undertaken a substantial number of interpreting assignments as a public service interpreter. and translated several million words both into English and Portuguese for many different high profile organisations, such as the European Commission, Scottish Courts and Tribunals Service, Crown Office and Procurator Fiscal Service, Police Scotland, as well as other public sector and corporate organisations. In addition to being a trained linguist, the author also worked in the language service industry as a senior manager for more than 10 years, where he started getting involved in the development of training packages for interpreters and translators. He has been involved in discussions with many public sector organisations regarding quality standards and professional development of linguists, where he has been a constant advocate of the professionalisation of the public service interpreting profession in the UK.

The purpose of this manual is to provide clear and helpful information for maintaining gravel roads. Very little technical help is available to small agencies that are responsible for managing these roads. Gravel road maintenance has traditionally been "more of an art than a science" and very few formal standards exist. This manual contains guidelines to help answer the questions that arise concerning gravel road maintenance such as: What is enough surface crown? What is too much? What causes corrugation? The information is as nontechnical as possible without sacrificing clear guidelines and instructions on how to do the job right.

This Poverty Reduction Strategy Paper on the Democratic Republic of Congo discusses economic policies and development. The macroeconomic and budget framework has been developed to take into account the effects of sectoral policies to maintain macroeconomic stability, a necessary condition for laying the foundation of economic growth and poverty reduction. It is based on the profile of public spending, the assessment of costs for achieving the Millennium Development Goals by 2020, and the sector-based economic growth theories taking into account the uncertainties of the international environment and the real potential of the Congolese economy. It is found that it allows for a realistic programming of public spending while highlighting the main budgetary choices proposed by the government.

Witty and thought provoking, two Vatican astronomers shed provocative light on some of the strange places where religion and science meet. "Imagine if a Martian showed up, all big ears and big nose like a child's drawing, and he asked to be baptized. How would you react?" —Pope Francis, May, 2014 Pope Francis posed that question—without insisting on an answer!—to provoke deeper reflection about inclusiveness and diversity in the Church. But it's not the first time that question has been asked. Brother Guy Consolmagno and Father Paul Mueller hear questions like that all the time. They're scientists at the Vatican Observatory, the official astronomical research institute of the Catholic Church. In *Would You Baptize an Extraterrestrial?* they explore a variety of questions at the crossroads of faith and reason: How do you reconcile the The Big Bang with Genesis? Was the Star of Bethlehem just a pious religious story or an actual description of astronomical events? What really went down between Galileo and the Catholic Church—and why do the effects of that confrontation still reverberate to this day? Will the Universe come to an end? And... could you really

baptize an extraterrestrial? With disarming humor, Brother Guy and Father Paul explore these questions and more over the course of six days of dialogue. *Would You Baptize an Extraterrestrial* will make you laugh, make you think, and make you reflect more deeply on science, faith, and the nature of the universe.

The profession of legal translators and interpreters has been unjustly neglected despite its relevant role in international and multilingual legal settings. In order to bridge this gap, this volume brings together contributions from some of the leading experts in the field, including not only scholars, but also internationally acclaimed professional legal translators and interpreters. Coming from different EU Member States, the contributors address the status quo of the profession of legal translators and interpreters within their respective states, while proposing ways to raise the standards of the profession. In particular, effort is made to make the profession more uniform Union-wide in terms of training and accreditation of legal translators and interpreters and quality of their services. Topics covered include ISO standards for interpreting services in judicial settings, EULITA, Directive 2010/64/EU on the right to translation and interpretation in criminal proceedings, legal translation, translation of multilingual EU legislation, document translation, whispered interpreting, and the need to introduce uniform programmes for the education and training of legal translators and interpreters. Offering a mix of theory and practice, the book will appeal to scholars, practitioners and students with a special interest in legal translation and interpretation in the EU.

As business cycles speed up, many customers gain significant competitive advantage from quicker and more accurate business decision-making by using real data. For many customers, choosing the path to co-locate their transactional and analytical workloads on System z® better leverages their

existing investment in hardware, software, and skills. We created a project to address a number of best practice questions on how to manage these newer, analytical type workloads, especially when co-located with traditional transactional workloads. The goal of this IBM® Redbooks® publication is to provide technical guidance and performance trade-offs associated with resource management and potentially DB2® data-sharing in a variety of mixed transactional / data warehouse System z topologies. The term co-location used here and in the rest of the book is specifically defined as the practice of housing both transactional (OLTP) and data warehouse (analytical) workloads within the same System z configuration. We also assumed that key portions of the transactional and data warehouse databases would reside on DB2 for z/OS®. The databases may or may not reside in a DB2 data-sharing environment; we discuss those pros and cons in this book. The intended audience includes DB2 data warehouse architects and practitioners who are facing choices in resource management and system topologies in the data warehouse arena. This specifically includes Business Intelligence (BI) administrators, DB2 database administrators (DBAs) and z/OS performance administrators / systems programmers. In addition, decision makers and architects can utilize this book to assist in making platform and database topology decisions. The book is divided into four parts. Part I, "Introducing the co-location project" covers the System z value proposition and why one should consider System z as the central platform for their data warehousing / business analytics needs. Some topics are risk avoidance via data consolidation, continuous availability, simplified disaster recovery, IBM Smart Analytics Optimizer, reduced network bandwidth requirements, and the unique virtualization and resource management capabilities of System z LPAR, z/VM® and WLM. Part I also provides some of the common System z co-location topologies along with an explanation of the general pros and cons of each. This would be useful input for an architect to understand where a customer is today and where they might consider moving to. Part II, "Project environment" covers the environment, products, workloads, workload drivers, and data models implemented for this study. The environment consisted of a logically partitioned z10TM 32way, running z/VM, Linux®, and z/OS operating system instances. On those instances we ran products such as z/OS DB2 V9, IBM Cognos® Business Intelligence Version 8.4 for Linux on System z, InfoSphere™ Warehouse for System z, InfoSphere Change Data Capture, z/OS WebSphere® V7, Tivoli® Omegamon for DB2 Performance expert. Utilizing these products we created transactional (OLTP), data warehouse query, and data warehouse refresh workloads. All the workloads were based on an existing web-based transactional Bookstore workload, that's currently utilized for internal testing within the System p® and z labs. While some IBM Cognos BI and ISWz product usage and experiences information is covered in this book, we do not go into the depth typically found in IBM Redbooks publications, since there's another book focused specifically on that

"Sex, Gender and Substance Use" describes how both biological and social factors affect people's use of substances. There is a lot of research carried out on substance use, prevention and treatment in which sex and gender are missing. This book describes the concepts of sex and gender, what they mean and why including them in substance use research, practice and policy is vital. Substances such as alcohol, drugs, nicotine, and tobacco all have differential effects on females and males. Social and cultural gendered factors affect how women and men react to prevention, treatment and policies. The book includes numerous examples of how sex- and gender-sensitive research can increase our understanding and improve prevention and treatment, and why striving for gender-transformative substance use practice and research remains a gold standard.
